Subject: Clean Air for Portland

Hello Mr McLerran,

As a resident in a hotspot of SE Portland, I want to ask that the DEQ, or a privately hired company, immediately start emergency air monitoring and soil testing of all hotspots that have been identified in Southeastern Portland as well as North and Northeastern Portland.

Understandably, Bullseye and Uroboros Glass have received a great deal of attention and focus because of the testing results in those two areas, yet they are not the only two hotspots that exist in Eastern Portland. We urgently need data about soil content and airborne toxins in all hotspots of Portland now.

Residents of north and northeast Portland, including those in the Rose City Park neighborhood, want investigation of their area. It is urgent to assess the conditions there, and the possibility that yet another glass company has existed there. Residents of other parts of SE Portland, particularly those that live near Precision Cast Parts, believe their situation needs more attention and urgent assistance as well.

Arsenic, nickel, lead, cadmium, chromium, and other pollutants need to be studied further immediately to determine their level of health threat to ALL residents of Portland equally. Every hotspot particularly needs assistance to monitor air and soil quality so that problem solving can take place and solutions can be developed and implemented.

Once again, I am requesting that emergency air monitoring and soil testing begin immediately in all hotspots of Portland and that all areas and residents be protected and treated equally.

Thank you very much for your time.

Sincerely,

Exemption 6
